SEGMENT 1 · 4 MINUTES

Why you, why now

A student hands in a paragraph that is better than anything they have written all year. In class, they cannot explain a single sentence of it. It has happened several times now.

That is not a discipline problem, and it is not going away. It is the problem this curriculum exists to solve, and it is already in your room.

That scenario is ADEK's own — "The Perfect Homework", from the Train-the-Trainer safeguarding lab.

The plain facts

- AI literacy is a **mandatory entitlement for every student, KG to Grade 12** — not an elective, and not only for ICT.
- Teaching begins **the week of 21 September 2026** — your first lesson falls somewhere in that week, not necessarily on the Monday. ADEK is bulk-uploading the full curriculum, lesson plans and teacher toolkits to InstructTwin now; that upload is still running, so your grade may not be there yet.
- This module is the sixty minutes that gets you to your first lesson.

- We meet in person on **21 September** to rehearse — moderation, micro-teach, and the questions you raise here.

Why this module is shared the way it is

Hook, model, practice, and reflection. The format is part of the message. The next fifty-six minutes.

Scope & Sequence

aisa-ai-web.github.io/The-Learning-Hub/PD%20Modules/ai-literacy-scope-and-sequence.html

What you're actually teaching

One spiral curriculum, KG–Grade 12, for every student, with **three proficiency tiers**

Scope & Sequence

aisa-ai-web.github.io/The-Learning-Hub/PD%20Modules/ai-literacy-scope-and-sequence.html

The four phases

Phase	Grades	Learner profile	Pedagogical signature
1 / KG	KG1–KG2 Ages 4–5	AI Aware Explorer	Play → explore → understand Unplugged; no direct AI tool use
2 / Cycle 1	Grades 1–5 Ages 6–10	AI Literate Thinker	Reason → interact → refine Rules, logic and data; begins interacting with AI tools
3 / Cycle 2	Grades 6–8 Ages 11–13	AI Solution Builder	Build → evaluate → improve Data, models and workflows
4 / Cycle 3	Grades 9–12 Ages 14–18	AI Systems & Solutions Designer	Design → integrate → govern Integrated AI systems

The most commonly assumed-wrong thing in the framework: KG uses *no* AI tools at all. Phase 1 is entirely unplugged. Tool use begins in Phase 2, Grade 1 and up.

The four strands

These run through *every* grade, gaining complexity as the phases climb.

- 1. AI Conceptual Understanding
- 2. Critical Evaluation and Informed Interaction
- 3. AI Creation, Engineering and System Design
- 4. Responsible Governance, Data Privacy and Societal Impact

The whole map, grade by grade

The shape above is the summary. The **Scope & Sequence** is the full KG–Grade 12 curriculum map: what every grade covers, what students are expected to reach by the end of each phase, and how each strand builds year on year.

Open the Scope & Sequence

Opens in a new tab. The purple button in the corner of the screen opens the same thing from any point in this module.

Time allocation

KG and Grades 1–5: **one period per week**. Grades 6–8 and 9–12: **two periods per week**.

How AISA delivers this in Grades 6–12: one timetabled period per week, with the rest of the entitlement completed asynchronously. Elementary is unchanged — one timetabled period per week.

Scope & Sequence

aiaa-ai-web.github.io/The-Learning-Hub/PD%20Modules/ai-literacy-scope-and-sequence.html

Place three outcomes

Not an exam on the architecture — the point is that you can place your own lessons. Pick the strand each outcome belongs to.

1. "Learners classify each claim in an AI summary as supported, misleading or not established, citing evidence." Which strand?

AI Conceptual Understanding

Critical Evaluation and Informed Interaction

Responsible Governance, Data Privacy and Societal Impact

AI Creation, Engineering and System Design

Yes. Checking, classifying, comparing and justifying against evidence is the heart of strand 2.

2. "Learners recognise personal information and identify trusted adults." Which strand?

AI Creation, Engineering and System Design

AI Conceptual Understanding

Critical Evaluation and Informed Interaction

Responsible Governance, Data Privacy and Societal Impact

Yes. This is the KG1 ethics focus — strand 4 starts on day one, it is not bolted on at the top of the school.

3. "Learners distinguish between human senses and basic machine inputs through unplugged play." Which phase?

Phase 4 — AI Systems & Solutions Designer (Grades 9–12)

Phase 3 — AI Solution Builder (Grades 6–8)

Scope & Sequence

aisa-ai-web.github.io/The-Learning-Hub/PD%20Modules/ai-literacy-scope-and-sequence.html

Phase 2 — AI Literacy (Grades 3–5)

Phase 1 — AI Aware Explorer (KG1–KG2)

Yes. Human senses versus machine inputs, unplugged, is the Phase 1 core milestone.

Who is doing the thinking?

This is the one idea that remains constant across all five moves: the teacher's role in the arrangement; this is the

Scope & Sequence

aisa-ai-web.github.io/The-Learning-Hub/PD%20Modules/ai-literacy-scope-and-sequence.html

Two words that are not the same thing

Instructional approach — how the learning experience is designed. ADEK names five: opening, warm-up, inquiry, practice, reflect.

Facilitation move — what you do in the moment. Also five, and they are what this segment is about.

The five facilitation moves

- 1 **Prompt**
Frame a task that leaves thinking to do.

- 2 **Inquiry**
Identify claims, questions and evidence needs.

- 3 **Critique & evaluate**
Check, classify, compare and justify.

- 4 **Practice**
Repeat the skill with less support.

- 5 **Reflect**
Explain the learning and transfer it.

The five moves are a repertoire, not a formula. They mark five moments where a teacher can either protect or take over a learner's thinking.

Ms Hana's lesson

This case is set in **Grade 7**. The five moves are identical at every band — read it for the decisions, not the grade. What Ms Hana gets wrong here is exactly what is easiest to get wrong in a Grade 2 classroom.

The case. Grade 7, 32 learners, 45 minutes. *Learning outcome:* learners evaluate how faithfully an AI summary represents a source, classify its claims, justify decisions with evidence and revise misleading wording.

The problem. Ms Hana's first instinct is to tell them the summary is wrong, underline every error and show a corrected version. The books would look accurate — but she would have performed the evaluation.

The source text given to learners

During a fictional two-week Grade 7 trial, students kept phones away during lunch. Of 84 students who answered the survey, 75 noticed no difference in their learning during the previous two weeks to 75 during the trial. The school did not measure learning or academic results. The student council recommended a longer trial before any permanent decision and requested a quiet-space option.

Scope & Sequence

aisa-ai-web.github.io/The-Learning-Hub/PD%20Modules/ai-literacy-scope-and-sequence.html

The faulty AI summary

"The phone-free lunch was preferred by nearly every Grade 7 student. It doubled social interaction and improved academic learning. No students were negatively affected, so the school should immediately make the phone ban permanent."

Use these to judge each option

- The AI response must not finish the task.
- Learners must select, check, compare, justify or revise.
- Teacher questions should probe rather than reveal.
- Practice fades support; reflection transfers the method.

Choose the strongest move at each moment

1 • Prompt. How should Ms Hana launch the evaluation?

"This AI summary is wrong. Find the five mistakes I noticed."

"How faithfully does this summary represent the source? Mark one claim you currently trust and one you would check. Do not decide overall yet."

"Ask an AI tool to rewrite the summary more accurately."

Yes. It leaves the judgement open and gives learners something to do. Announcing that it is wrong hands them the answer; asking AI to rewrite it removes the task altogether.

2 • Inquiry. How should learners decide what needs investigating?

"Which version sounds more professional? Vote for the one you prefer."

"Choose the claim that would matter most if it were wrong. Turn it into a checking question and name the evidence you need."

Ms Hana underlin

Scope & Sequence

aisa-ai-web.github.io/The-Learning-Hub/PD%20Modules/ai-literacy-scope-and-sequence.html

Yes. Learners select the claim and name the evidence. Doing the underlining for them is the trap — it looks like modelling and is actually substitution.

3 • Critique & evaluate. What should learners do with the source and summary?

Ms Hana reveals a colour-coded answer slide and learners copy the correct classifications.

Learners vote by show of hands on whether the whole summary is accurate.

Classify each claim as supported, misleading or not established; cite an exact sentence or number, justify the decision and revise one claim.

Yes. Classify, cite, justify, revise — four verbs, all of them the learner's. A vote produces an opinion with no evidence behind it.

Practice summary — same source text

"Two-thirds of surveyed students talked more during the trial, and board-game borrowing increased. These results prove phone-free lunches improve every student's wellbeing, so a permanent ban is the only reasonable option."

4 • Practice. How should Ms Hana test whether learners can apply the skill with less support?

Ask the chatbot to correct its own summary, then discuss whether the new version sounds better.

Give the same checklist, matched evidence, colour labels and sentence stems used in the first task.

Individually select the most consequential weakness, cite evidence, justify a classification and revise it — without category prompts or a teacher-selected claim.

Yes. Practice means less scaffolding, not the same scaffolding again. Repeating the full support

structure tests recall, not transfer.

Scope & Sequence

aisa-ai-web.github.io/The-Learning-Hub/PD%20Modules/ai-literacy-scope-and-sequence.html

5 • Reflect. How should the hand help learners transfer the checking method?

"Did you enjoy evaluating the AI summary?"

"Write definitions for supported, misleading and not established."

"The next time an AI summary sounds confident, what will you check first, and why?"

Yes. Reflection has to point forwards to be transfer. Definitions test vocabulary; enjoyment tells you nothing about the learning.

Now repair one

Pick one weak option above and rewrite it as the exact words you would say.

Exact words, not a description of them. The important learner decision must stay open.

Instead of "This AI summary is wrong...", I would say: ...

The takeaway, in one line: the teacher frames and probes; learners select, check, justify and revise.

Your first lesson

Everything so far has been about the first lesson falls somewhere in the plan you will teach in your grade is below.

Scope & Sequence

aisha-ai-web.github.io/The-Learning-Hub/PD%20Modules/ai-literacy-scope-and-sequence.html

Which grade are you teaching?

Choose your grade... ▾

Want the whole picture? The **Scope & Sequence** lays out every grade from KG to 12 — the progression map, end-of-phase expectations, and how each strand builds year on year.

Open the Scope & Sequence

It opens in a new tab, so you will not lose anything you have typed.

Your six-line delivery plan

This is the thing that will be on your desk when the lesson starts. Write it against the focus above — it is what your grade's lesson is actually for.

1 · The outcome this lesson is heading for

2 · The hook — what you open with

3 · Two facilitation moves you'll use, and where

Prompt · inquiry · critique & evaluate · practice · reflect

4 · What students will produce that shows their thinking

5 • The one part you're least sure about

This sets the agenda for 21 September. Be honest — it is more useful than being tidy.

Scope & Sequence

aisa-ai-web.github.io/The-Learning-Hub/PD%20Modules/ai-literacy-scope-and-sequence.html

6 • What you need from Brandon before the 21st optional

This one reaches me as soon as you save it.

Then: the lesson itself on InstructTwin

ADEK's full lesson plans and student materials are being bulk-uploaded to [InstructTwin](#), and that upload is still running — so your grade may well not be there yet. Staff accounts are not reliably showing assigned grades either. Both are mine to chase, not yours. When your lesson does appear, read it against the plan you just wrote: yours says what the lesson is for, theirs says how they would run it.

When you have access

1. Sign in at adek.instructtwin.com with your school username and password.
2. Find your grade, then your unit.
3. Open your first lesson for the week of 21 September.
4. Read the lesson template through once — note what each section is for.
5. Locate the student-facing materials before the lesson, not during it.

Can't get in? You have not lost anything — your plan above is the part that matters, and it is already saved. Tick the box below so I know, and finish the module. Access is mine to chase, and I would rather know today than on the 20th.

☐ I could not get into InstructTwin.

What good work looks like

Every criterion is described with a list of things that good work looks like.

Scope & Sequence

aisa-ai-web.github.io/The-Learning-Hub/PD%20Modules/ai-literacy-scope-and-sequence.html

Proficient is the entire grade to aspire to. Design for it.

Three things student work has to do

- 1. Explain the output
- 2. Evaluate and improve it
- 3. Justify the choices

A polished AI output is not proof of learning. Assess the thinking behind it.

Two pieces of work

Both samples below are invented for this module — they are illustrations, not real student work.

SAMPLE A

"The phone-free lunch trial demonstrates a significant positive correlation between device restriction and peer socialisation. The data indicates a marked increase in collaborative engagement, with board-game circulation rising substantially. These findings suggest that a permanent policy would yield sustained benefits for student wellbeing and community cohesion."

SAMPLE B

"56 out of 84 said they talked more. That's most but not all — 10 felt worse and the summary didn't say that. I checked the board game number (40 → 73) and that one is in the source. But 'improved academic learning' is not, because it says they didn't measure learning. So I'd call that one not established. I'd want a longer trial too, like the council said."

Which shows more learning — and what is your evidence?

Name the one question you would ask the author of Sample A to find out what they actually understand.

Scope & Sequence

aisa-ai-web.github.io/The-Learning-Hub/PD%20Modules/ai-literacy-scope-and-sequence.html

We are not moderating yet. Agreeing what Proficient means, so it means the same thing in every classroom, needs other people's judgements in the room. That is the anchor session on 21 September.

Responsible AI and the AISA route

This is the highest-stakes use of AI in the classroom. ADEK is explicit that this is *a memory aid, not an official school reporting route*. It helps you hold the shape of a response in your head. It does not tell you who to call. That is what the next box is for.

Scope & Sequence

aisha-ai-web.github.io/The-Learning-Hub/PD%20Modules/ai-literacy-scope-and-sequence.html

The five principles, and what each looks like in a classroom

Principle	In practice
Human oversight	AI assists; people decide and stay accountable.
Data privacy	Never put personal or sensitive data into a prompt.
Wellbeing and safeguarding	Protect students from harmful or age-inappropriate content.
Honesty and integrity	Cite sources, no invented facts, and no passing AI work off as your own.
Fairness	Check outputs for bias and unfair assumptions.

The five everyday risks

Risk	What it looks like
Over-reliance	Critical thinking fades.
Misinformation	Invented facts and no sources.
Bias	Unfair or skewed outputs.
Privacy	Personal data exposed in prompts.
Wellbeing	Harmful or age-inappropriate content.

Notice → Record → Report → Act → Review.

ADEK is explicit that this is *a memory aid, not an official school reporting route*. It helps you hold the shape of a response in your head. It does not tell you who to call. That is what the next box is for.

The AISA route

An AI-related concern is a safeguarding concern. It goes down the same route as any other — to your Safeguarding Lead, not to the IT team and not to the tool's support desk.

ELEMENTARY

Alia Nejdawi

Assistant Principal · **Safeguarding Lead (DSL)**

anejdawi@aisha.sch.ae

Counsellors: Laylin Chong · Sara AlBeainy

SECONDARY

Savvas Largatzis

MS Assistant Principal

slargatzis@aisa.sci

Scope & Sequence

aisa-ai-web.github.io/The-Learning-Hub/PD%20Modules/ai-literacy-scope-and-sequence.html

Counsellors: Naiema Zaki (HS) · Jenn Guss (HS) · Joel Hunter (MS)

The timescale. Report every safeguarding concern to your DSL **within 24 hours**. If a child may be at immediate risk, contact them **straight away** — do not wait for the end of the lesson or the end of the day. Never promise a student secrecy, and never investigate it yourself.

The first ten minutes — a worked example

During an approved classroom activity, an AI tool unexpectedly generates disturbing or age-inappropriate content. A student is visibly upset and shows you the response.

1. **Attend to the student first.** Calm, matter-of-fact: they have done nothing wrong. Move them away from the screen.
2. **Don't delete it.** Leave the response on screen or screenshot it. It is the evidence, and the DSL will need to see exactly what appeared.
3. **Stop that activity** for the whole class — not just the one device. Move to the unplugged alternative.
4. **Record it factually** while it is fresh: what the student entered, what appeared, what the student said, what you did, and the time. What happened, not what you think it means.
5. **Contact your Safeguarding Lead the same lesson.** If the student is distressed or the content concerns them personally, contact the DSL immediately rather than waiting.
6. **The DSL decides what happens next** — including whether parents are contacted and whether the tool is withdrawn. That call is not yours to make, and neither is reassuring the student that nothing will come of it.

This sits alongside the ADEK Safeguarding and Student Protection policies and Federal Decree-Law No. 26 of 2025 on Child Digital Safety. The full route, including whistleblowing and the counsellor referral process, is in the [AISA Safeguarding module](#).

Acknowledgement

- ☐ I have read the responsible-use principles, the five risks and the escalation route above.

This records that you have read it, with a timestamp. It is not a test of understanding — that is confirmed face to face on 21 September, with two live scenarios.

Commit

The one thing I will do in my first week that will help me be successful is

Scope & Sequence

aisa-ai-web.github.io/The-Learning-Hub/PD%20Modules/ai-literacy-scope-and-sequence.html

The one question I'm bringing to 21 September

Finish and record my completion

Face to face — the activity

This segment is what we call a “hook” — it’s the first 7 minutes of a 20-minute segment. It’s 3:10–4:25. Nothing here is new, but it’s a good idea to read it before you start the activity. [aisa-ai-web.github.io/The-Learning-Hub/PD%20Modules/ai-literacy-scope-and-sequence.html](https://github.com/aisa-ai-web/The-Learning-Hub/PD%20Modules/ai-literacy-scope-and-sequence.html) so you can read it before you start the activity.

Scope & Sequence

[aisa-ai-web.github.io/The-Learning-Hub/PD%20Modules/ai-literacy-scope-and-sequence.html](https://github.com/aisa-ai-web/The-Learning-Hub/PD%20Modules/ai-literacy-scope-and-sequence.html)

THE HOOK · 7 MINUTES

Which claims would you check?

A Grade 3 class collected some data, then asked an AI to write up what they found. Read both columns. **Which of the AI’s claims would you want checked before this went on the wall?**

What the class collected

Our Grade 3 class counted birds in the school garden for two weeks. We saw **34 sparrows, 12 mynas and 5 pigeons**.

We counted on Monday and Wednesday mornings only. On two mornings it rained and we did not count. We never counted in the afternoon.

What the AI wrote

“We counted 51 birds in total. Sparrows are the most common bird in Abu Dhabi. The school garden has more birds than any other garden in the city. Because we saw so many birds, the garden is healthy and needs no changes.”

Worth noticing: the arithmetic is right. $34 + 12 + 5$ really is 51. Everything that follows it is the problem — which is exactly why “check the maths” is not enough of a habit to teach.

Then: how would you teach this?

In your pair, take the same task down to your own grade. Open the [Scope & Sequence](#), find your grade, and talk through what you would actually do in the room to **keep the students thinking** rather than handing them the answer.

If your pair stalls, try one of these

- **KG–Grade 2:** do it unplugged. Sort real objects, make one wrong claim out loud, and let them catch you.
- **Grades 3–5:** hand them the claim and the data separately. Which claims can they tick, and which can they not?
- **Grades 6–8:** ask what extra data would be needed to make the strongest claim true. That is the whole lesson.
- **Grades 9–12:** ask who is harmed if the write-up is published as it stands, and what the writer owed the reader.

Write your pair's answers below. Optional, unmarked, saved as you type — I read them, and they are what the next session gets built from.

Which claims would you check, and why? optional

There is more than one. The

Scope & Sequence

aisa-ai-web.github.io/The-Learning-Hub/PD%20Modules/ai-literacy-scope-and-sequence.html

At your grade, what would you do to keep the students thinking? optional

The version you would actually run on a Friday, not the ideal one.

ACTIVITY 2 · 12 MINUTES

Four strands, in your own words

The four strands run through **every** grade — what changes is how demanding each one gets. Take each in turn and write, in your own words, what it looks like in **the grades you actually teach**. A sentence each is plenty.

Nothing here is required and none of it is marked. It saves as you type, and I read it — it is how I find out which strand needs more support before the next session.

1 · AI Conceptual Understanding optional

How AI works. What does “how it works” mean at your grade level?

2 · Critical Evaluation and Informed Interaction optional

How learners question and judge what AI gives them — the bird-count task lives here.

3 · AI Creation, Engineering and System Design optional

How learners build and improve solutions. Building can be unplugged.

4 • Responsible Governance, Data Privacy and Societal Impact optional

How learners decide what should be done — and who it affects.

Scope & Sequence

aisa-ai-web.github.io/The-Learning-Hub/PD%20Modules/ai-literacy-scope-and-sequence.html

If one of the four is hard to write, that is the useful finding. It usually means that strand has no obvious home in your grade yet — which is exactly what I want to know, and exactly what the next session should be about.

The question under all of it: who is doing the thinking — the student, or the machine? If your version has students checking the machine, you are already teaching the strand.
